

FAHAD YUSUF QURESHI

Web Developer & Agentic AI Engineer

fahadyusuf000@gmail.com | (0322) 788 2125 | [LinkedIn](#) | [GitHub](#) | Lahore, Pakistan

EXPERIENCE

IT Consultant / Developer — Farooq Group of Hospitals

Present

Hospital Information Management System (HIMS) development

- Built the Letters module of a Hospital Information Management System (HIMS) for generating and archiving official employee letters — see HIMS Letter Management System under Projects for details.
- Built BillTrace, an audit-friendly internal app for recording and searching insurance bill numbers, with admin/viewer roles, CSV export, and an audit log supporting restore/revert of deleted or edited records.
- Stack: Node.js/Express, EJS, SQLite (dev) / PostgreSQL-Supabase (prod), deployed on Render.

Founder — Techudev

Present

Website & marketing services for local businesses

- Started with website development and marketing services for local brands in Lahore, then shifted towards voice agents and currently working on producing voice agents for dental clinics.

PROJECTS

HIMS Letter Management System

- Built the Letters module of a Hospital Information Management System (HIMS): HR staff generate official employee letters (termination, warning, experience certificate, promotion) from versioned templates, rendered HTML → PDF via Puppeteer and stored immutably in S3-compatible storage.
- Implemented JWT auth/RBAC (HR admin, branch head, viewer), archive/search, and a dashboard by month, type, branch, and status.
- Stack: React (Vite, Tailwind); Node.js/Express; PostgreSQL + Prisma; Puppeteer; MinIO/S3-compatible storage.

Real-Time Voice Receptionist for Aesthetic/Dental Clinics

- Built an AI voice receptionist using Retell for agent configuration and voice cloning to deliver a natural, Urdu-accented conversational experience for local clinics.

CampusBuddy — Full-Stack Web Platform

- Developed a full-stack university platform with real-time chat, announcements, lost-and-found, and an anonymous confession board; integrated OpenAI-based summarization to condense ongoing conversations.
- Stack: React (TS, Vite); Node.js (Express, TS); Firebase Firestore and PostgreSQL.

Password Strength Manager — Cybersecurity

- Built a tool to evaluate password robustness using entropy-based scoring, with end-to-end hashing and encryption to keep stored data confidential.

GoatIt — Livestock Marketplace App

- Built a full-featured marketplace app for buying and selling livestock, digitizing a traditionally informal, in-person process.
- Stack: Flutter; Firebase; Cloudinary.

SKILLS

Agentic AI: Vapi, Retell, Livekit, Upfirst AI, Custom LLMs, VPS configuration, GSM setup, SIP setup, ElevenLabs, Cartesia, Python

Web Development: JavaScript, C++, CSS, Node.js, React.js, REST APIs

Databases: PostgreSQL, Supabase, Prisma, Firebase, SQL, SQLite, MongoDB

DevOps: Docker, CI/CD (GitHub Actions), Git, Render, MinIO/S3 storage, environment & secrets management

Core CS: Data Structures, Object-Oriented Programming

EDUCATION

Bachelor's in Computer Science — FAST-NUCES, Lahore

2026
